

Antarctica and The 2041 Foundation

Geography club

What and Where is Antarctica?

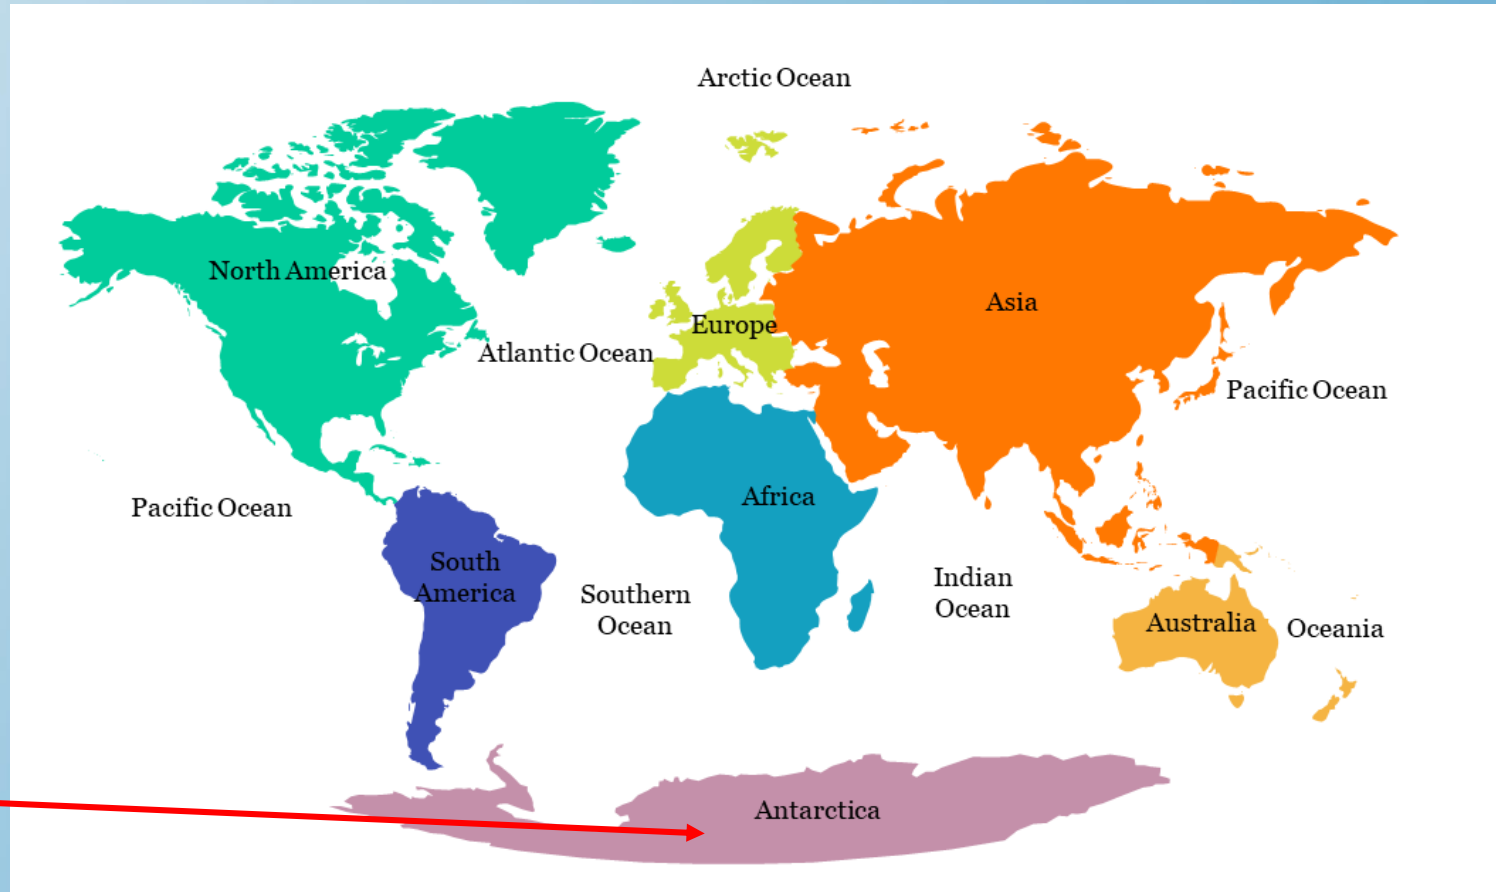

- Antarctica is a continent in the southern hemisphere.
- It is home to many different species. Some of them include penguins, seals and walruses.
- Antarctica, as you might already know is extremely cold. It is the world's coldest continent.

What and Where is Antarctica?

- Antarctica is located at the bottom of the globe which means that it is very cold.
- Can you spot Antarctica on the map?

Antarctica

What species live in Antarctica?

- There are approximately 35 different species living in Antarctica.
- Some species include; penguins, seals, walruses and many, many more.
- If we destroy Antarctica, then all of these species could become extinct.

Mum and baby seals

Arctic fox

Why is 2041 such an important year?

- 2041 is such an important year because it is the year when the government decide what they should do with Antarctica.
- You may think that this is not important, but it really is. Antarctica is the only continent that doesn't have any person, house or building there. It is the only continent that is deserted with people.
- If we get rid of Antarctica and start to build things there, then there will no longer be a continent in the world which is peaceful and full of nature.

**SO BE A CHAMPION OF
ANTARCTICA!**

WHO IS ROBERT SWAN?

Who is Robert Swan

- Robert Swan was the first man to walk to both the north pole to the south pole.
- Robert Swan is the head of the 2041 foundation.
- He has been to Antarctica many times and is saying that we should protect it and not destroy it. **WHICH IS TRUE!**
- He is working with the rest of the 204 foundation to explore Antarctica and show that we should protect it and not destroy it.

What is Climate change and how does it affect Antarctica?

- **Climate change** is how the world is getting hotter because of the greenhouse gases around the earth.
- **Climate change** can effect us, as humans, as the world gets hotter and if we don't react quickly, then it could get too hot that we could completely disintegrate.
- **Climate change** effects Antarctica as when ice gets too hot, then it will melt, so if Antarctica gets to hot, then all the ice-caps will melt. This means that all the animals in Antarctica will drown.
- It also effects Antarctica as the penguins could get to hot and die as they have a thick layer of fur.

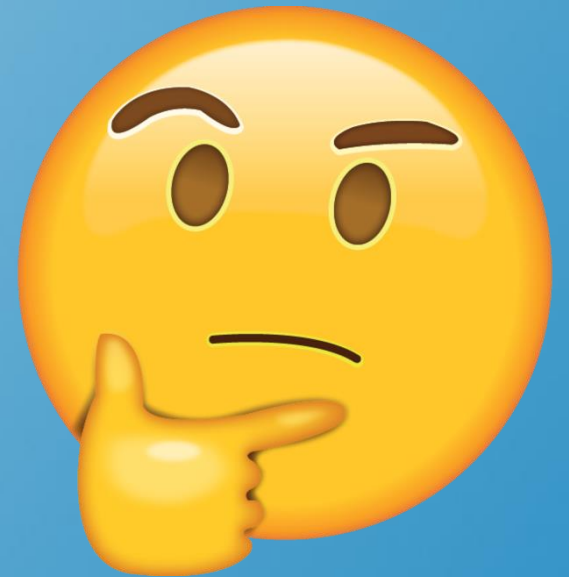

What can children do?

Things that you can do are:

- Not throw things away when you've used them as this can harm the creatures.
- You can recycle
- You can learn more about the subject so that you understand.
- You can support the 2041 foundation.
- You can give donations
- And so much more...

Quiz time:

1. What is the 2041 foundation?
2. Can you name three different animals that live in Antarctica?
3. Who is Robert swan?
4. (Opinion question): what will you do to help to keep Antarctica the way that it is forever?
5. Where is Antarctica (northern hemisphere or southern hemisphere?)

Let's watch a video...

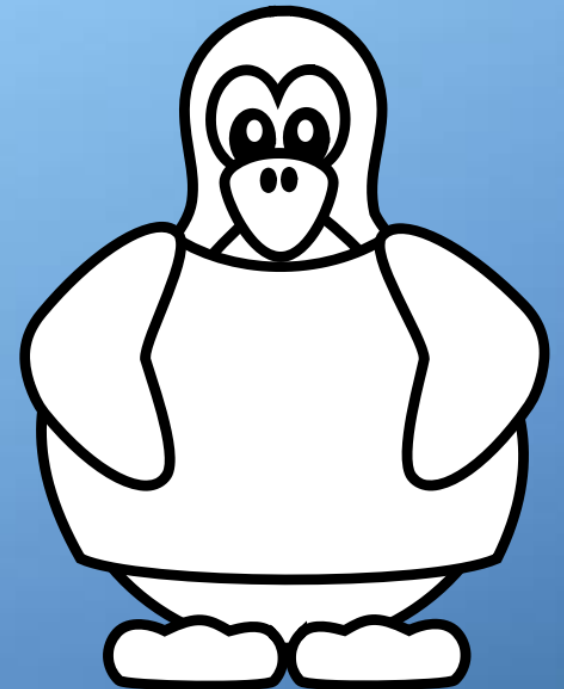

<https://www.bbc.co.uk/bitesize/topics/zyhp34j/articles/zjg46v4>

Task:

For your task you will be designing a penguin and on it, you will be writing a promise about what you will do to keep Antarctica the way it is.

Geography club will be hosting a competition and whoever has the best penguin wins. Your prize will be a champions of Antarctica badge.

Task:

You are all going to receive a Geography club quiz.

Whoever wins the quiz and the penguin will win a champions of Antarctica badge!
